This study aimed to identify electronic government and its continued growth in providing government services. Then recognize the need to support information security best practices to successfully implement new social and technical procedures in government agencies that serve the public. The ultimate goal of government (at all levels) is to establish and strengthen a relationship with the larger population. As their participation leads to government productivity, for the distance between citizens and government to be reduced, public services must be provided in convenient and efficient forms, where employees working in the public sector still have the ability to maintain the process to provide additional assistance. The study concluded that it became clear to us that the technological revolution is an information revolution based on personal data, the protection of which is linked to the necessity of protecting privacy, and that every natural person has the right to view his personal data in the public and private sectors and has the right to request amendment or cancellation in the event of an error in it. It recommended that administrative control keep pace with the tremendous development in information technology, modernize the means of monitoring and development in information technology, and continuously raise awareness of the importance of legal protection of electronic personal data as one of the applications of the right to privacy. Pointing out the risks associated with negligence in preserving data privacy.

Keywords: personal data, right to privacy, electronic government
